

IN THE SPECIFICATION

Please change the paragraph of Page 7, line 25 – Page 8, line 5 as follows:

Returning to FIGURE 1, ~~FIGURE 4~~, the web server 106 may be implemented by a variety of known machines, such as computer workstations, personal computers, etc. The web server 106 performs jobs such as presenting a web page providing instructions for users seeking access to digital objects in the library, authenticating users according to the web server access codes 112a, generating temporary FTP access codes for authenticated users' use at the FTP server 108, and redirecting authenticated users to the FTP server 108.

Please change the paragraph of Page 11, line 24 - Page 11, line 6 as follows:

The sequence 400 includes setup 402 and run 410 steps. In setup 402, technicians populate 404 the library 110 with a number of machine readable digital objects. Optionally, this step may be conducted on an ongoing basis 405, as the library 110 is repeatedly replenished with new software objects, revisions, patches, and other objects as they become available. In step 406, technicians configure the database, and more particularly, store storing the following in the database 112: the web server access codes 112a and the mapping 112b. In step 408, technicians program, activate, boot, install, manufacture, load, active, or otherwise configure the web server 106 and FTP server 108 for operation.
